VALCOM

NEC

Push voice and text through thousands of SIP phones.

Broadcasting announcements to NEC™ IP Telephones is simple with Valcom's innovative NEC enabled Telephone Paging Appliance. A simple browser interface provides the flexibility to program phones into groups including a single phone, groups of phones, or all phones for emergency alerts and every day communications.

The emergency priority page override feature allows broadcasting to phones that are active on a phone call so they may be utilized as emergency notification endpoints by ensuring they receive alerts.

Schools, universities and colleges, government agencies, healthcare facilities, and others can now enhance their communications by transforming all NEC telephones into a notification endpoint. Lock down, evacuation, intruder, general announcements, live pages, severe weather alerts can now be sent to your NEC phones.

Telephone Paging Server *VE6023*

- Audio and Text to NEC IP Phones
