Digital Clock Protocol Interface

6-AMP 2 Wire Clock Driver

Digital Clock Head End Drive

The Digital Clock Protocol Interface (V-DCPI) allows many Valcom analog intercoms to provide accurate digital time correction to Valcom wired and wireless clock systems. The V-DCPI can be used in conjunction with the V-VCU, 2-Wire Clock Driver for wired clock correction.

The Valcom 2-Wire Clock Driver (V-VCU) corrects Valcom analog and digital display clocks over a single pair of UTP cable. Time may be adjusted to update from once every second to once an hour. Depending on the size of your system and set up, multiple V-VCUs may be used.

The V-DCH Digital Clock Head End combines a V-VCU and V-DCPI on a convenient 2u 19" rack mount shelf
