VE6013 Cisco™ Telephone Paging Server

Broadcast to Cisco Telephones - Easy, Simple Set Up

Broadcasting page announcements to Cisco™ IP Telephone speakers is made simple by Class Connection's innovative Cisco Telephone Paging Server. A simple browser interface provides flexible programming. Phone speakers may be configured to allow emergency and non-emergency message broadcast to one phone, groups of phones or all phones. With our emergency priority page feature you can even broadcast to phones that are currently in use! Educational facilities, Government agencies, healthcare facilities and others can now maximize their communication coverage by utilizing their existing Cisco telephones to receive emergency announcements, general pages, severe weather information or everyday notifications.

Send live audio to Cisco IP Phones during an overhead PA announcement
Broadcast emergency notification messages such as intruder, lockdown, etc.
Broadcast emergency weather notifications such as tornado, hurricanes, etc.
Schedule broadcast via a calendar based software interface*
Trigger emergency messages with panic buttons*
Send pre-recorded messages to Cisco phones*

Browser Based GUI
