

# A Trouble-Free State-of-the-Art Communication Solution!

*Valcom Engineered Solution's XPE™ Dynamic School Intercom System offers high-quality internal communications with a multitude of features, easily configured to suit the most demanding requirements.*

## **Cost Savings**

With the XPE there's no need to run special cable or replace peripheral equipment. This capability provides an enormous cost savings! Maintenance savings alone often exceed the cost of an upgrade. The affordable XPE solution can even eliminate the annoying, labor-intensive bid process.

## **Easy Installation**

The XPE easily replaces old-fashioned, outdated school intercom systems. These often require constant attention and maintenance. The XPE is a modern solution that easily fits into the maintenance budget. Most installations take less than a day for retrofit applications. Simply remove the existing head-end equipment and quickly install the XPE and it's done. Plug-n-Page™ technology makes it easy!

## **Easy Administration**

XPE is a user-friendly administrative software tool that allows on-site management and administration of schedules, tones and announcements that can be modified – daily, weekly, monthly or annually. Administrative changes are easily made from any networked PC.

Any .wav file may be scheduled to broadcast at a certain time, or played in an instant with a simple click of the mouse or push of a button. The priority level can override class change tones, music and normal pages to ensure emergency broadcasts are given top-level precedence. This makes sure that precise, accurate information is heard by students and staff when it is critical.

## **The XPE Has A Wide Variety of Features:**

### **User-Friendly Administrative Software**
