

6 Channel Amplifier

The Valcom 6 Channel Amplifier is designed as a replacement amplifier for 25-volt speaker lines, and satisfies audio applications without compromising performance. The amplifier is ideal for use in any multi-channel power amplification 25-volt application such as school common area paging systems, general paging systems, cinema paging systems, boardroom audio applications, multiple channel restaurants, and hospital/clinic/doctor's office environments.

Features & Advantages

6 Independent Channels of Amplification

Allows for retrofit of centrally amplified 25-volt systems.

Individual Volume Control Per Channel

Easily set volume in different areas.
