

Woodgrain Wall Speakers

Valcom's Woodgrain Wall Speakers have a built-in amplifier and volume control that allows you to distribute sound effectively throughout your organization. These speakers are suitable for areas where you need intelligible voice and background music such as offices, classrooms, restaurants and retail stores. The Woodgrain Wall Speaker is available in a walnut finish with either a light brown open-weave grille or a dark brown cloth grille that helps them to blend in well with your environment. The speaker is also available as a Corridor speaker, which allows you to provide bi-directional sound for long hallways.
