The Valcom VM-150 is designed for connecting heavy gauge speaker wire to Amphenol terminated intercom circuit cards. It connects to a 25 pair female Amphenol connector and allows connection to the wire pairs via screw terminal. The screw terminals are numbered with each half of a twisted pair on adjacent screw terminals.

Note that heavy gauge speaker wire will not support common mode rejection, a benefit of using UTP cabling. Without this support, signal crosstalk may occur.
