

Enhance your communications by transforming all NEC telephones into a notification endpoint.

Broadcast Essential Paging & Emergency Notifications

Broadcasting announcements to NEC™ IP Telephones is simple with Valcom's innovative NEC-Enabled Telephone Paging Server.

A simple browser interface provides the flexibility to program phones into groups including a single phone, groups of phones, or all phones for emergency alerts and every day communications.

The emergency priority page override feature allows broadcasting to phones that are active on a phone call so they may be utilized as emergency notification endpoints by ensuring they receive alerts.

Lock down,
Evacuation,
Intruder,
General Announcements,
Live Pages,
Severe Weather Alerts
can now be sent to your NEC phones.
