Syn-Apps Welcomes Valcom to its Certified Endpoint Partner Program

Portland, OR [June 14, 2018] — Syn-Apps LLC, a pioneer in emergency mass notification solutions, welcomes Valcom to its **Certified Endpoint Partner Program** today. Valcom is an industry-leading manufacturer of high-quality loudspeaker paging, intercom, and telecommunication products.

Syn-Apps' Certified Endpoint Partner Program expands channel reseller's product portfolios by providing customers a trusted mass notification solution, complete with plug-and-play integration between Syn-Apps' software and certified Valcom endpoints. The Program helps to facilitate innovation and growth between Syn-Apps and IoT hardware manufacturers while providing mutual customers with true freedom of choice.

"Valcom's IP and SIP Endpoint solutions offer a great addition to Syn-Apps systems," said John Mason, President of Valcom. "We are enthusiastic about the opportunity to provide Syn-Apps customers with proven-compatible products for alerting and notification."

Valcom has successfully completed interoperability testing between Syn-Apps' Revolution Notification Platform and Valcom's full line of IP-enabled devices. The API also provides backwards-compatibility between certified Valcom devices and Syn-Apps' legacy notification software, SA-Announce.

"We are pleased to welcome Valcom to the Certified Endpoint Program. Valcom has been delivering voice paging products for many years, together our joint customers can extract greater value from the products they have come to rely on for critical communication," said Ian Pitts, President and CEO of Syn-Apps LLC.

Manufacturers participate in the program by integrating Syn-Apps' API and testing their hardware for interoperability with Syn-Apps' notification software. Use of the API is free of charge to IoT endpoint manufacturers and carries a small fee for mass notification providers that integrate Syn-Apps' API into their own solutions; allowing them to leverage the growing ecosystem of Syn-Apps' certified IoT devices.
