

# Message-On-Hold USB Devices

Valcom's V-9989 USB digital multi-message device repeater stores up to 99 different messages in an MP3 format on an industry standard USB flash drive. The messages can be assigned as continuous play, timed play, or triggered on the eight inputs that unit provides.

The V-9988 USB message-on-hold device eliminates time limitations and provides an infinite opportunity for continuous background music or messages. The digital message on hold systems supports the MP3 playback without any special drivers or software.

These devices are ideal for airports, manufacturing, retail, office buildings, hospitals, theme parks, and museum exhibits displays.
